

Dal settore sanitario/ospedaliero è nato il materasso anti-decubito Polionda Waterlily, che accoglie il corpo in tutte le sue irregolarità lasciando "spazio" all'aria nel movimento. L'unione di tre poliuretani con diverse portanze apportano un corretto sostegno al corpo garantendo un comfort elevato grazie allo strato superiore in memory foam.

This anti bedsores mattress created from the health hospital sector experience, conforms to the different body shapes and allows circulation of air on movement. The combination of three polyurethanes of different firmness on the base gives correct support to the comfortable memory foam layer.

Né de l'expérience sanitaire et hospitalière, le matelas anti-escarre Polionda Waterlily accueille le corps avec toutes ses irrégularités et laisse, dans le mouvement, « de l'espace » à l'air. L'union des trois polyuréthanes à portances différentes assure un juste soutien ; la couche supérieure en mousse visco-élastique assure un confort élevé.
